

**Delivering
projects and
solutions for
the transfer of
water in a variety
of operating
environments.**

With a blend of the highest quality equipment and highly experienced people, our integrated services range from water extraction and provision, through to water transfer, storage and boosting inline systems.

Our excellent reputation for providing Resources, Government and Commercial clients with the right advice, design, equipment, resources, and reporting for each pumping application makes us a stand-out business. This is something we're very proud of.

We also offer customised Dry Hire packages and can provide all associated on-site training and support.

AMG Pump Rentals utilise Best Practice and the most appropriate cloud technologies in order to efficiently service and maintain both our assets and clients' project outcomes. Our Truly Integrated Approach makes us unique - we take ownership of every aspect of a pumping application project, from inception to deployment and beyond.
